The MUSAI branch keeps the seasons

T-532 -- design and concept drafts, 2026-11-08. DRAFT: nothing here is in the game until the user picks.

THE IDEA

Each of the six MUSAI has four seasonal forms (24 looks) and wears the one DaemonsSeason() gives it: CONTENT on the northern year, CONTEXT on the southern. OVERLOADED's idea, moved from the weather to the year; separate from evolution; the type never changes. The vehicles are part of each body, never ridden. A home season is the fullest form.

THE BRANCH

MUSAI wears the season itself. CODEMUSAI is the shared tongue: a small piece of each sibling's body in that sibling's season, and glyph lights. MASKMUSAI winter (runners, windscreen crest); LENSMUSAI spring (model-plane wings, propeller); CAREMUSAI summer (pontoon floats, canopy); SEEKMUSAI autumn (knobby wheels, roll-bar frame).

HOW (RECOMMENDED)

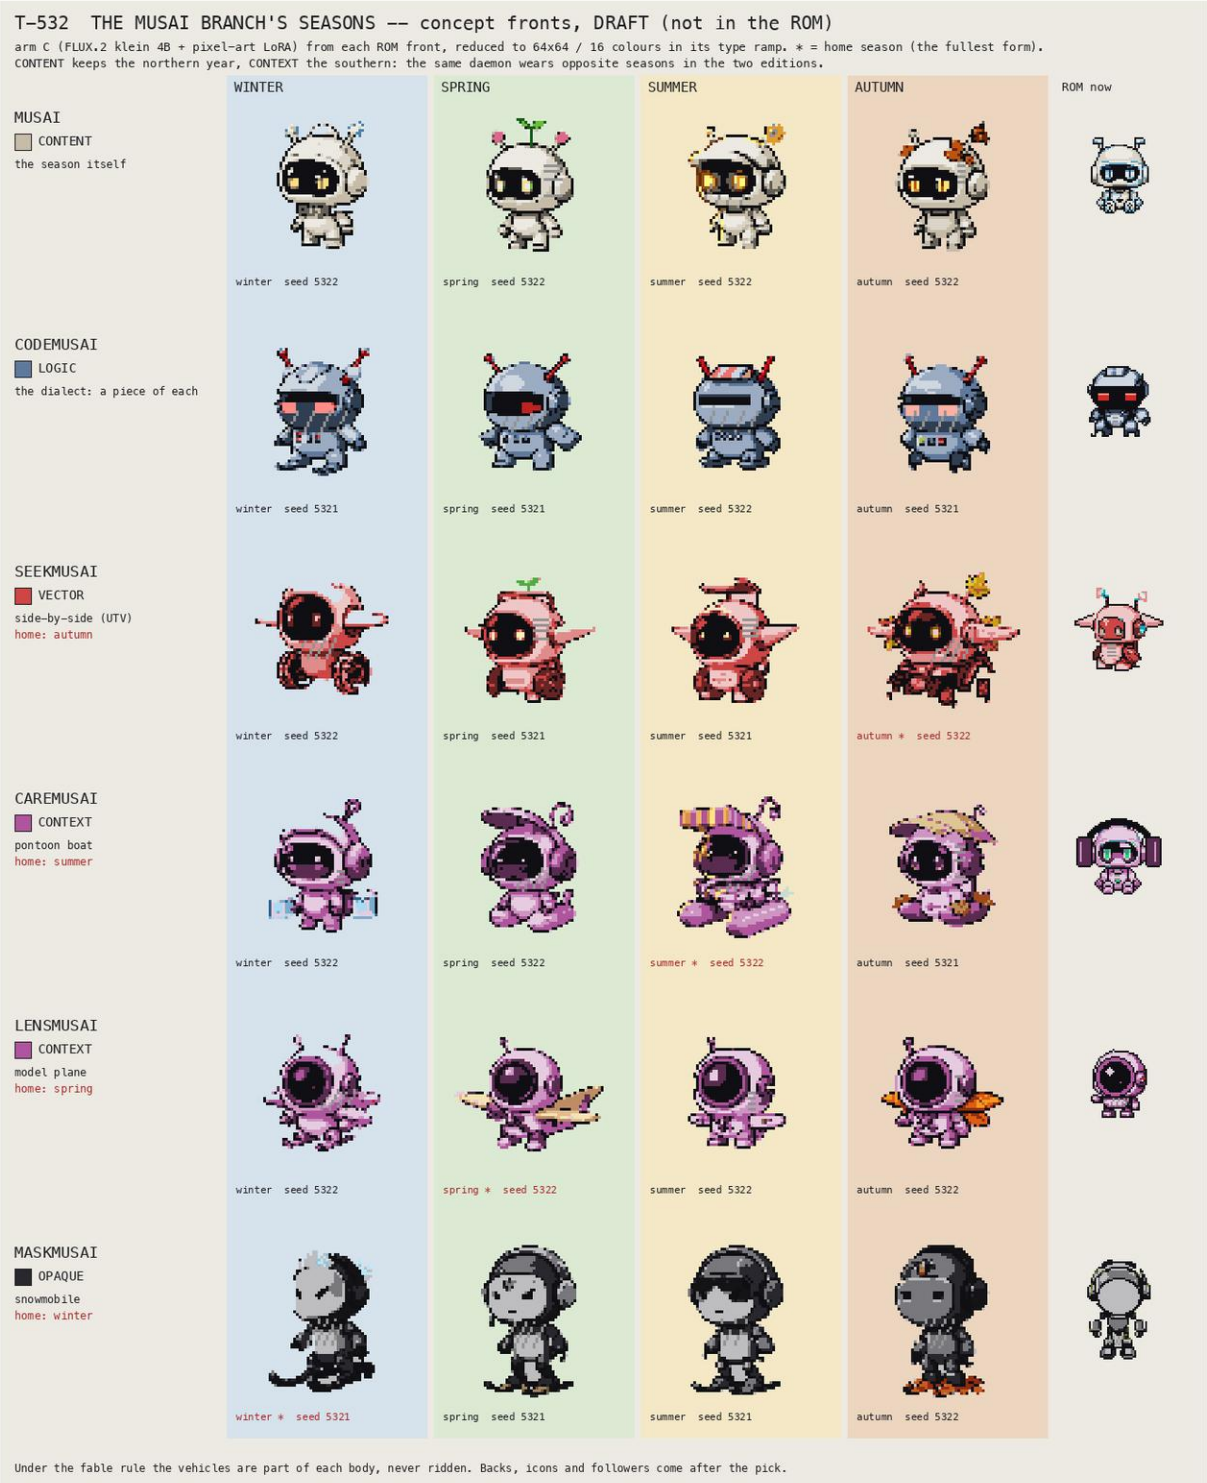

A seasonal display id, the way the INDEX's Unown letters work: one function, called where pictures, palettes and icons are chosen, so battle, party, PC, follower, summary and INDEX all follow. The species never changes: no save change. About 85 KB of ROM (of 4.9 MB free), 0 bytes of EWRAM and IWRAM. A battle keeps the season it began in.

CRYPTOPHASIA

CODEMUSAI's own routine, learned at 30. LOGIC, special, 100% accurate, 10 PP. Power 40, +20 for each other MUSAI-branch daemon in the party still able to fight (40 to 140). Move 383; 12 letters, the limit. DRAFT text: 'Words only its own / family can follow. / It hits harder for / each of them near.'

FOR THE USER

How forms are built; whether today's art becomes summer; look only or a battle edge; whether the change is noticed; INDEX entries per form; CRYPTOPHASIA's power rule and level; the seed for each concept. All in docs/musai-seasons-draft.md, section F.
