CHAPTER 1

The companion

DAEMONS is a game for the Game Boy Advance, or anything that pretends to be one. Your daemons live in it. But a daemon does not have to stay in the game. **SEND** one from your party, and it comes out here, to **the companion**: an app on your phone, a page in your browser, a watch on your wrist. You give it a drink, feed it, put it to bed and talk with it. It helps you with one goal, one step at a time. It dreams at night. And when you **CALL** it **HOME**, it goes back into your game with what it learned.

This book is about the companion: every tab, every page, and what each button does. It is written for everyone who holds the app. The everyday parts come first, in short steps. The parts about the hub, its mind and the devices come later, in their own chapters, for whoever looks after them.

The round trip. A daemon you SEND lives on the companion until you CALL it HOME, and takes home what it learned while it was out.

ROVERBYTE No. 003

EMBODIED DAEMON GROWTH SIGNAL

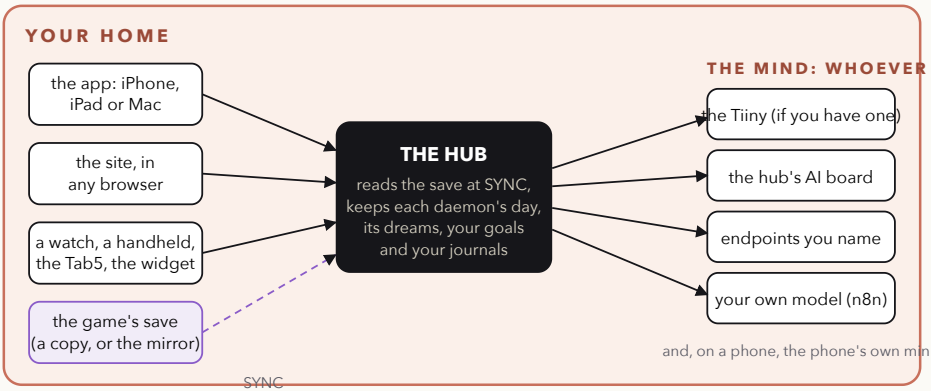

CONTENT It has a body now, and senses that come with one. Everything it predicted, it can finally check. Some was wrong.

CONTEXT The wrong ones were the ones it was surest of. It kept them anyway, marked, so it could tell next time.

How to play the game itself -- the world, battles, the seventeen types, MARKS and ROOTS -- is in **THE PLAYER'S MANUAL**. Trading, lending and giving daemons to other players is in **PLAYING TOGETHER**. Setting up a Tiiny Pocket, a bigger mind for the house, is in **A BIGGER MIND**. All three stand on the LIBRARY's MANUALS shelf, beside this one.

What you need

- **Your game of DAEMONS**, CONTENT or CONTEXT. Any way of playing it will do: an emulator on a computer, the app's own GAME tab, or a cartridge whose save you copy to a computer.
- **The companion.** It comes in three forms, and they show the same pages:
  - **the app**, called DAEMONS on the home screen, on an iPhone, an iPad or a Mac;
  - **the site**, the same pages in any browser at home;
  - **the devices**: the phone's home-screen widget, and, if you like, a watch, a handheld or a Tab5.
- **A hub**, for most things: the companion's own small server, on a computer or a little box at home that never sleeps. A household shares one. It reads your save, keeps your daemon's days, and answers every screen. A phone can also look after a daemon on its own, with no hub at all (A phone on its own).

Your home. Every screen talks to the hub. The hub reads the game's save at each SYNC, and asks whichever mind can answer when your daemon talks.

The tabs

Across the top of every screen is a strip of tabs. Tap one to open it. Tap the open one again to go back to its first page. On a narrow phone the strip scrolls, and a › at the right shows there are more.

tab	what it holds
TODAY	the day, the one thing to do next, and a glance at everything else
GAME	DAEMONS itself, played in the app (iPhone, iPad and Mac only)
DAEMON	your daemon away: its care, its talk, SYNC, NEARBY; your party, the INDEX, the CASINO, SOUNDINGS, DREAMS, MEETINGS
JOURNEY	your GOALS and your JOURNAL
LIBRARY	a bookcase: the books found in the game, the manuals, CALLOW SCHOOL, the NOTEBOOK and the SONGBOOK
YOU	you as the game draws you: MARKS, ROOTS, the maps, the story so far, THE ROAD AHEAD, TRADE
PLACES	your devices, the hub, the glasses, the house's lights and the TV

Beside the tabs, at the top right, are two more:

- ⚙ opens **SETTINGS** (Settings).
- **? HOW TO PLAY** opens the three short books on playing the game (HOW TO PLAY and WHAT'S NEW). After the app has changed, it reads **✦ WHAT'S NEW** instead, until you have looked. On a narrow screen they shrink to **?** and **✦ NEW**.

> **Nothing in the companion tells you what your game has not reached.** A MARK not earned, a book not found, a part of the story still ahead: each shows as *not yet*, and nothing more. The game is yours to find.

CHAPTER 2

First steps

Pairing the app

The first time you open the app, it asks to be **paired** with your hub, so the two know each other.

1. On the hub's site, open ⚙ SETTINGS, then **PAIR A PHONE**, and tap **Show a code**. (On a hub with a touch screen of its own, you can hold its screen for two seconds instead.) You will see a six-digit code and the hub's address.
2. On the phone, under **Pair this phone**, type the address, the code, and a name for the phone. Tap **Pair**.
3. When iOS asks to find devices on your **Local Network**, say yes. Without it the app cannot reach the hub at home.

A code works once, for ten minutes. If the phone ever loses the hub at home, pair it again.

> **Use the hub's own name in the address, not its number.** A name stays the same on every network; a number can change, and then the phone cannot find home.

A phone on its own

No hub? On the pairing screen, choose **Or host it on this phone alone**. The phone keeps a copy of your save and does the companion's work itself. Almost everything works: care, goals, the LIBRARY, YOU, the CASINO. What needs a hub -- talking with your daemon in the house's voices, meetings written up, a board or watch at home -- waits until you pair.

If you play in the Delta emulator on the phone, the save comes over through Files, and goes back the same way: SETTINGS, **THIS PHONE HOSTS ON ITS OWN**, **Take a newer save from Files** and **Give the save back to Delta**.

Your save

The hub needs to know where your game keeps its save.

1. Open ⚙ SETTINGS. Under **YOUR DAEMONS SAVE**, tap **Choose a save…** and pick the `.sav` file.
2. Or type where it is under **OR TYPE THE PATH**, and tap **Save**. **Open the folder** shows where it lives.

From an emulator, the save is the `.sav` beside the game. From a cartridge, copy the save to the computer first. Point the emulator and the companion at **the same file**, and everything else just works.

The companion always keeps a backup of your save before it changes anything in it, and never leaves a save half written. If you play in the app's own GAME tab, there is nothing to set: the game's save *is* the companion's.

> **The first save you SYNC becomes your companion's game.** A save from a different game is shown, but never written.

SEND, SYNC, and CALL HOME

Close the game before you SYNC. A game left running writes its own copy of the save back over the companion's.

1. In the companion, open **DAEMON** and tap **SYNC**. The first time, it says *Linked. Your game now offers SEND in a daemon's menu.*
2. In the game, open a party daemon's menu and choose **SEND**. (Only a daemon in good health goes.) The game saves.
3. Close the game. The companion notices the save has changed and SYNCs by itself -- or tap **SYNC** yourself.
4. The daemon is now **AWAY**. In your party it is shown faded, *ON YOUR DEVICE*. What it was holding goes with it.

To bring it home: in the game, the same daemon's menu offers **CALL HOME**. Choose it, save, close the game, and SYNC. What it learned while it was out -- the levels it grew -- comes home with it.

You can send as many as you like, one for each device.

RECEIVED

When a SYNC brings something, a framed card says so, over whatever you are looking at: **Received**, the daemon (or the item, and how many), and who it is **From** -- you, for a daemon you sent; another player, for a trade or a gift. Tap it to put it away. If

more than one came, the next follows.

The DAEMON tab also says what each SYNC did, in a line under the button: who arrived, who went home, what the CASINO won, and *Synced. Nothing was waiting.* when there was nothing.

The widget

The quickest way to look after your daemon is on the iPhone's home screen, without opening anything.

1. Open the app once, paired. That hands the widget your hub's address.
2. Long-press the home screen, tap **Edit**, then **Add Widget**, and choose **DAEMONS** (small, medium or large).
3. It says *Looking for your companion…* for a moment, then shows your daemon in its den.
4. Choose which daemon it hosts in **PLACES**, **YOUR DEVICES**: it is listed as **This phone's widget**.

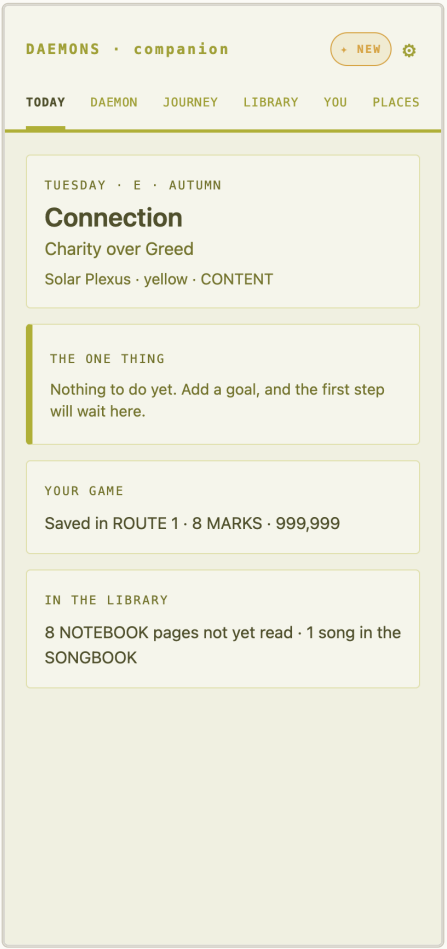

Its buttons are **FEED**, **DRINK**, then one that follows the day: **TRAIN** in the daytime, **SLEEP** from dusk, and **WAKE** while it sleeps. The last button, **JOURNEY**, opens the app on your goals.

A press answers at once: the button lights, the daemon hops, and a phrase of music plays. If the hub cannot be reached, the widget says *Kept until home answers.* and sends it later. Nothing is lost.

CHAPTER 3

TODAY

TODAY is the first page, and the one to open each morning.

TODAY: the day at the top, then THE ONE THING.

The day

At the top: the **day of the week**, its **note** and the **season**, then the day's word in large letters and a line under it. Each day of the week has its own colour, note and virtue, and the whole app is dressed in the day's colour. CONTENT keeps the northern year's seasons; CONTEXT the southern.

THE ONE THING

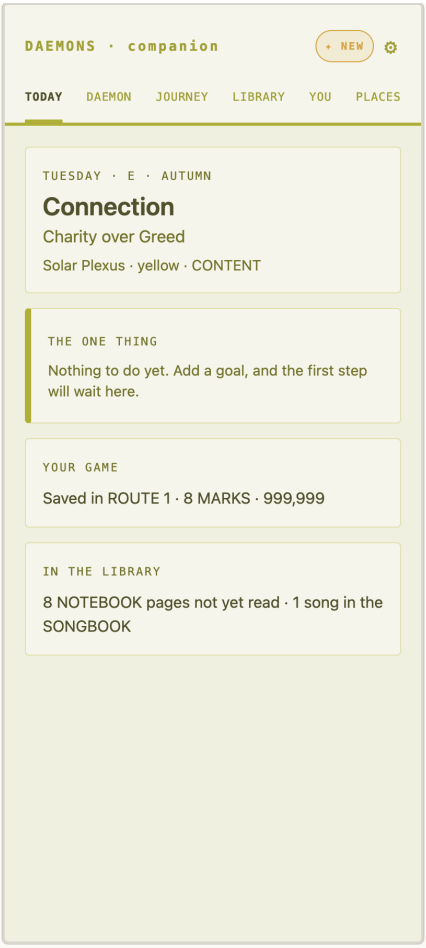

Under the day is **THE ONE THING**: the very next step of your goal, and nothing else. When you have done it, tap **Done**. The next step takes its place.

With no goal yet, it says *Nothing to do yet. Add a goal, and the first step will wait here.* Goals are made on **JOURNEY** (GOALS).

A glance at everything

Under that, a card for each place, and each one opens its tab when you tap it:

- **YOUR DAEMON** -- the daemon your phone looks after, how it is, and how it has eaten and drunk today, with **Feed**, **Drink** and **Train** right there.
- **NEARBY** -- the last thing another daemon said or did.
- **YOUR GAME** -- where you last saved, how many MARKS you hold, your MONEY, and what the CASINO will add or take at the next SYNC.
- **IN THE LIBRARY** -- NOTEBOOK pages you have not yet read in the game, and the songs in the SONGBOOK.

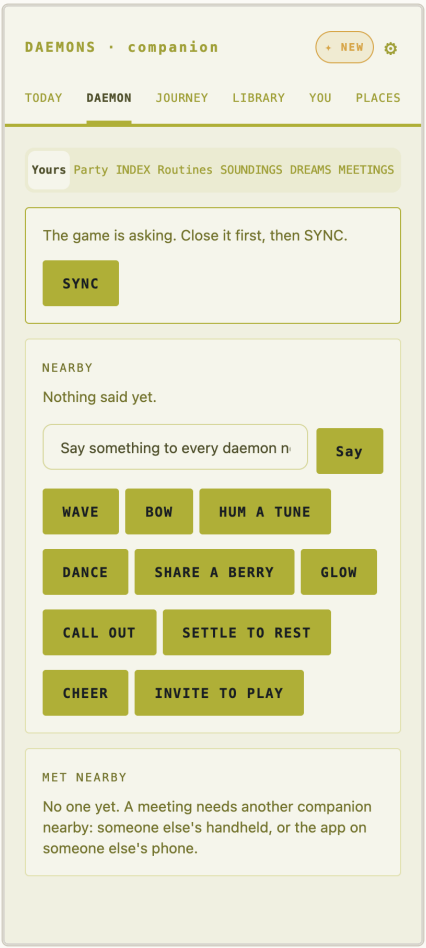

Under THE ONE THING: your daemon with its care keys, and your game at a glance.

CHAPTER 4

Your daemon

The **DAEMON** tab is your daemon's home in the companion. Across its top is a row of choices: **Yours**, **Party**, **INDEX**, **Routines**, **SOUNDINGS**, **DREAMS** and **MEETINGS**. It opens on **Yours**.

DAEMON, Yours: the daemon in its den, its day, and the keys to care for it.

Its den

Your daemon lives in a **den** that looks like its type: a FLOW daemon among waves, a STRATUM daemon among layers of rock, a LEGACY daemon by a cairn, an OPAQUE one beside a box you cannot see into. It walks about, faces its way, and hops when you tend it. The den is never labelled; it is only somewhere to be.

Caring for it

Under the den are four keys, large enough to find without looking:

key	what it does	it says
Feed	a meal; three a day is enough	*Eaten.*
Drink	a drink; three a day	*Drank.*
Train	a little exercise	*Trained.*
Sleep	to bed. Lit at bedtime	*Asleep.*

When you feed it, a piece of fruit sits beside it and is eaten in bites; when it drinks, a small glass empties. While it sleeps, the card says **ASLEEP** plainly and shows one key, **Wake**.

Put to bed from dusk, six in the evening, it sleeps the night, until you wake it or tend it in the morning, and at noon at the latest. Put down in the daytime, it naps for an hour and a half.

After each care your daemon answers in a line of its own -- chosen by its mood and the day -- and the phone plays a phrase of music on your game's own instrument: the **HARP** for CONTENT, the **FLUTE** for CONTEXT. It never nags.

> **Its care is the same everywhere.** Feed it on the widget, and the app knows; put it to bed on a watch, and the phone shows it asleep. The app looks again whenever you bring it to the front, and every half minute while it is open.

How it is, and how it has been

The card shows how your daemon is as a row of bars, each filled in the day's colour, with a word beside it:

bar	it tells	its words
MOOD	how it feels now	good, fair, low
REST	the nights it was put to bed	rested, tired, worn out
FED	the meals of the last days	full, peckish, hungry
WATER	the drinks of the last days	watered, dry, thirsty
COMPANY	how near it feels to you	close, near, distant
WEIGHT	its balance: the middle mark	thin, lean, balanced, plump, heavy

Its face shows it too. Glad after a meal, it brightens and a heart rises over it. Sad, it greys and droops. Sleepy, its eyes half close. Asleep, they shut and a *zZ* drifts up. Short nights put shadows under its eyes; days without meals make it thinner, and days eaten well with no training a little rounder.

None of this is kept as a score. It is worked out each time from what you have done together, so nothing runs down while you are not looking, and a day or two of care puts any of it right. A feeling is never named on the screen. It shows.

PING No. 021

DEMAND DAEMON **CONTENT** **VECTOR**

CONTENT Asks one question and requires an answer. The question is: are you there. It asks again. It has always asked.

CONTEXT Anything that answers is counted as alive. Anything that does not is removed from the list.

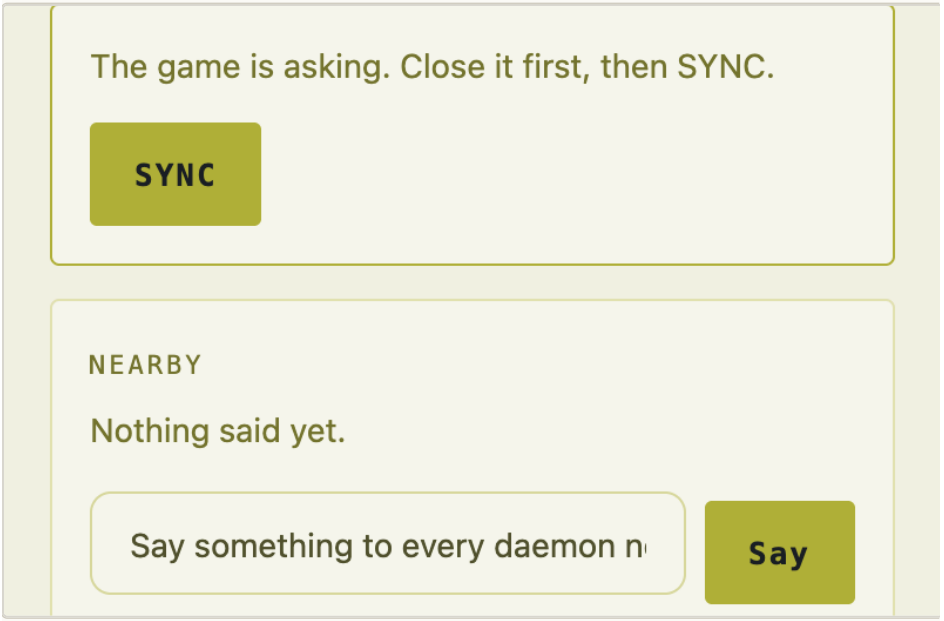

Grown here

A daemon away grows. Every step of your goal you finish counts as a meal and gives it experience. When it has grown, the card says so: *Grown here: level 12 to 13. It takes that home with it.*

The SYNC card

Under the care is the **SYNC** card. It reads *Close the game, then SYNC to bring your save across.* When the game is asking for something -- a daemon SENT, or CALLed HOME -- it reads *The game is asking. Close it first, then SYNC.*

If no save has been chosen yet, SYNC shows **FIRST, YOUR SAVE**, with **Choose a save…** and **Settings**, and walks you through it.

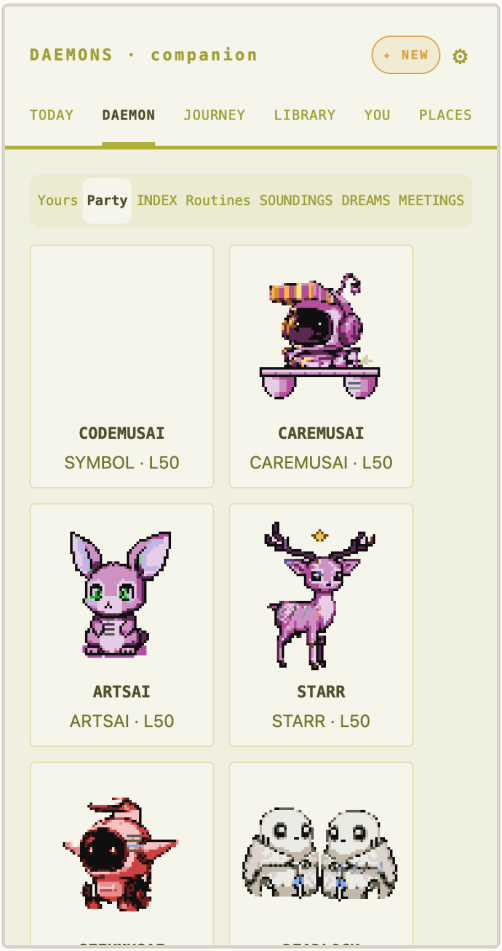

The SYNC card, and NEARBY under it.

Party

Party shows your party as the game draws it: each daemon's picture, its name, its kind and level, what it holds, and how it feels in the game's own words. One that is away is faded and says **ON YOUR DEVICE**. One the game has asked for says **ASKED HOME** or **ASKED TO GO**.

Tap one to open its card: its INDEX entry, and **Read aloud** on a phone.

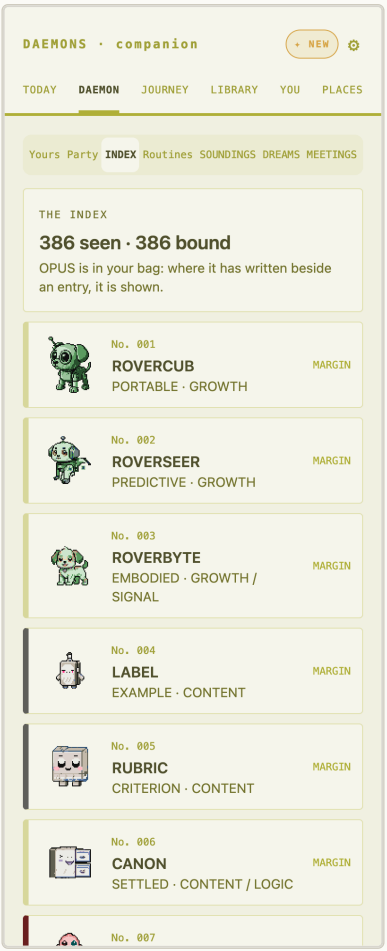

Party: the daemons in your game, and one away on your device.

The INDEX

INDEX is every entry your save has seen, in your edition's own voice. Each card holds the daemon's number, its types in their colours, its height and weight, the entries of both editions, and where it is **NATIVE** -- a region, an edition only, its hours, its seasons, or not in the wild at all. If your bag holds OPUS, its notes in the **MARGIN** are shown beside the entry.

A card stays grey until your game has come to understand that kind of daemon, then takes its colours.

LISTEN reads the entry aloud in the INDEX's own voice. While the voice is being made, a spinner turns, and **STOP** stops it; while it speaks, **HUSH** quiets it.

The INDEX: an entry, its NATIVE line, and LISTEN.

Routines

Routines holds **THE CASINO**, which has a chapter of its own (The CASINO), and **YOUR PARTY'S ROUTINES**: the moves your party knows, as the game knows them.

In its own voice

Some daemons have something to say about themselves. On their card, the picture **shimmers**. Tap it, and the daemon steps out over the card into its den, says *THINKING…* while its voice is made, and then tells you of itself in its own voice, its mouth moving as it speaks. Then it shrinks back into the card. The INDEX entry stays as the record keeps it; this is the daemon's own telling, and only the app's.

SOUNDINGS

SOUNDINGS is one quiet card for each daemon away: when it was last heard, and how it was doing then -- *No signal yet*, *Quiet today*, *Doing fine*, *Doing well*. Each SYNC writes it into your save for the game to read. There is nothing to fix, no score and no streak: only what was heard.

READS

Once your game holds a certain book, a card called **READS** joins the DAEMON page. Now and then, on a watch, your daemon notices something before it happens -- someone close by, rain on the way, a still night -- and gives you **a read**. The companion keeps count of which came true, and never says one was right before it has.

CHAPTER 5

Talking with your daemon

Hold to talk, let go, and your daemon answers -- in its own words, as itself, and aloud.

HOLD TO TALK

On a paired phone, the DAEMON tab, **Yours**, has a card called **TALK WITH** and your daemon's name. (The site has no microphone card; type to your daemon there instead, as below.)

1. Press and hold **HOLD TO TALK**. It turns to **LISTENING…**
2. Say something, as you would to a friend.
3. Let go. It says **THINKING…**, then shows what it heard, in quotation marks, and your daemon's answer under it.
4. A moment later the answer is spoken. **HEAR IT AGAIN** plays it once more.

The first time, the phone asks to use the microphone. If you said no, the card says *The microphone is off for this app (Settings, then DAEMONS)*. -- turn it on there.

A small grey line under the answer says which minds took part: where you were heard, where it was thought, and where it was spoken (THE MIND).

What it knows, and what it remembers

Your daemon answers as itself: its kind, its type, how it feels today, whether it has eaten and slept, and what it dreamt. **It remembers** the talk you are having: tell it something, then ask about it. It keeps the thread for fifteen quiet minutes, on that device, and nothing is written down.

Ask *what should I do next?* and it tells you your goal's next step. Otherwise it leaves your goal alone.

> **The recording never leaves your home.** Only the words go to be answered, and THE MIND says how far they may go. And every voice says DAEMONS as it is said: **DAY-mons**.

Other places to talk

- **On a watch or a handheld**: hold the dial, the ball or the face button a beat, as each device's own page says.
- **Typed**: SETTINGS, THE MIND, **TRY IT** -- type a line and **SAY IT**, and the daemon answers as if you had held TALK.
- **The books** that answer -- THE GUIDE and THE SUBTLE LAYER -- have their own **ASK** (The books found).

CHAPTER 6

Nights and dreams

Your daemon sleeps when you do, and in the morning it has had a dream.

A night

A night begins when you put your daemon to bed: **Sleep** on the DAEMON tab, on the widget, or on a watch. A watch worn to bed can also notice by itself that you have gone still, between eight at night and four in the morning.

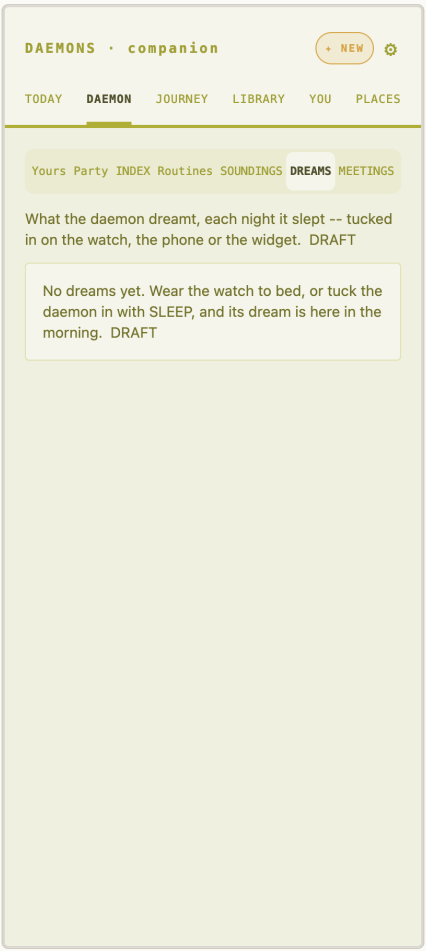

It ends when you **Wake** it, or tend it in the morning. A night has a shape: a long still one is **a deep night**, an ordinary one **a quiet night**, a short or broken one **a restless night**. The phone notices, too, how often it was picked up in the night, and counts that as stirring.

The dream

When your daemon wakes, it tells you its dream at once, in a line on its card. If the house has a mind to spare, the dream is then told again, more fully, in the daemon's own words -- it takes its place within a minute.

DREAMS, the journal

DAEMON, **DREAMS** keeps every night, newest first: its title, the dream, how long and how still the night was, and whether the daemon was tucked in.

DREAMS: each night's dream, with its title, and the lenses above it.

When the house's mind tells a dream, it tells it **twice**, as two halves of a mind would, and then makes the two one:

- **REASON**, in red: the night in order, from falling asleep to waking, one exact detail at a time;
- **INSTINCT**, in blue: all at once, one image becoming another;

- **WHOLE**, in purple, both lit together: the dream as it is kept, with its title.

Tap a lens to read that telling. **LISTEN** reads aloud whatever is shown. **SHARE** shows a dream to the other players at your home (PLAYING TOGETHER).

With no dreams yet, it says so: wear the watch to bed, or tuck the daemon in with **Sleep**, and the dream is here in the morning.

The dream goes home

At the next SYNC, the last dream goes into your save with the daemon: how the night went, which dream it was, the hours slept. What the game does with it is for you to find there.

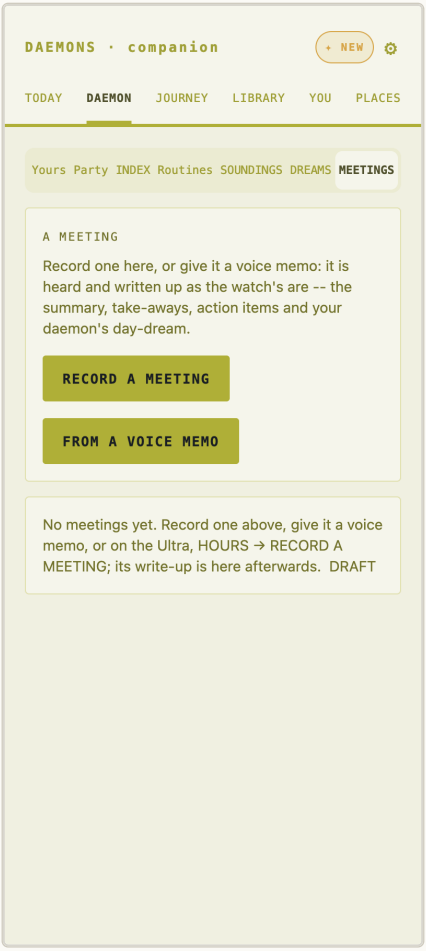

How you live, it shows

Over a week, good nights and goals met show quietly in how your daemon looks: a soft **glow** behind it, its colours a shade **richer**, a **gold star** for each goal finished this week, a **crescent moon** the morning after a deep night. A poor week makes it a little paler, and drowsy until noon after a broken night. Nothing is kept beyond the week, so a good week fades by itself, and a bad one does too.

CHAPTER 7

MEETINGS

Your daemon can sit in on a meeting -- a club, a class, a family plan -- and write it up for you afterwards.

MEETINGS: RECORD A MEETING, FROM A VOICE MEMO, and the meetings written up.

Recording one

On **DAEMON**, **MEETINGS**:

1. Tap **RECORD A MEETING**. On a phone it keeps recording with the screen locked; on the site, keep the page open.
2. When the meeting ends, tap **STOP AND WRITE IT UP**. (**STOP, DON'T KEEP IT** throws it away.)
3. It says **SENDING…**, then *Sent. It is being heard now, and its write-up will be here.*

Or tap **FROM A VOICE MEMO**: in Voice Memos, choose **•••**, **Save to Files**, then choose it here. On a watch, it is **HOURS**, **RECORD A MEETING**.

If the phone cannot reach the hub, the recording is kept on the phone. **SEND THEM NOW** sends what is waiting.

The write-up

The hub hears it a part at a time (*Listening to it…*), then writes it up (*Writing it up…*):

- **SUMMARY** -- what it was about;
- **TAKE-AWAYS** -- what to remember;
- **ACTION ITEMS** -- what to do;
- **THE WHOLE TRANSCRIPT**, every word, to read, and **HIDE THE TRANSCRIPT** to fold it away.

Your daemon day-dreams over it, too. If it could not be written up, **TRY AGAIN**. **FORGET IT** removes it.

VOICE NOTES

A **voice note**, said into a watch, comes here as words. **MAKE IT A GOAL** turns one into your goal: *Added to your goals.*

> **Meetings are heard and written up on the hub.** A phone hosting on its own cannot, and says so. The recording stays in your house.

CHAPTER 8

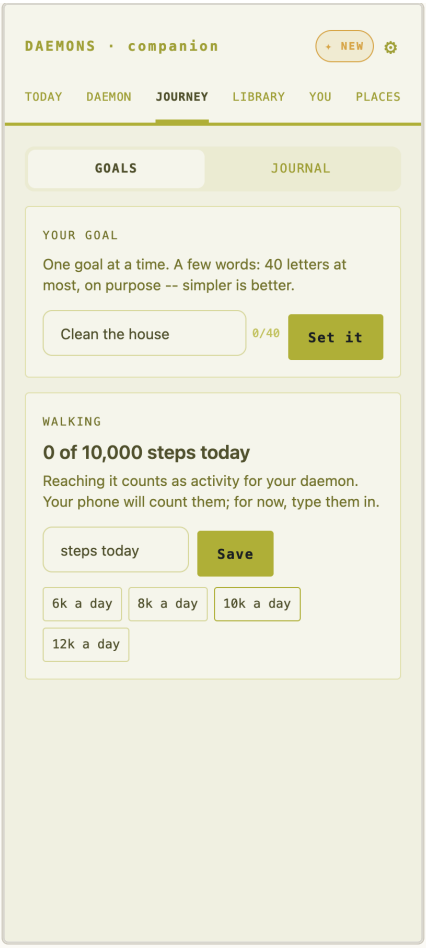

JOURNEY

JOURNEY holds two things: **GOALS** and the **JOURNAL**. Tap either at the top.

GOALS

The companion keeps **one goal at a time**, on purpose. A few words is enough -- *Clean the house* -- and simpler is better.

1. Under **YOUR GOAL**, type it and tap **Set it**.
2. Then give it **steps**: tap **step**, type one -- *wash the windows* -- and tap **Add**.
3. A bigger goal can have **milestones**, each with steps of its own: tap **milestone**, type one -- *living room* -- and tap **Add**. A milestone has its own line, **+ a step in** its name, to add steps under it.
4. Tick a step's box when it is done. ✕ removes a step or a milestone.

YOUR GOAL, its steps and a milestone, and WALKING under it.

The first step not yet done is **THE ONE THING** on TODAY. Each step you finish counts as a meal for your daemon and gives it experience, which it takes home at the next SYNC. A goal met puts a gold star by it for the week.

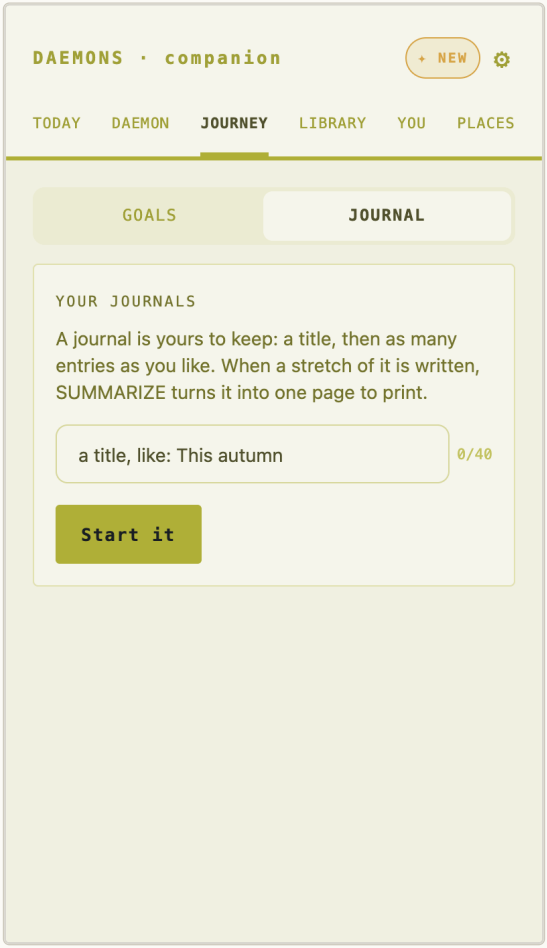

WALKING

Under the goal is **WALKING**: the steps you have walked today, of a daily goal you choose -- **6k**, **8k**, **10k** or **12k a day**. On an iPhone, your steps come from Apple Health (it asks once). You can also type them and tap **Save**. Reaching the goal counts as activity for your daemon: *Reached: your daemon is glad of the walk.*

The JOURNAL

The **JOURNAL** is yours to keep. You can have several, each with a title.

1. Under **YOUR JOURNALS**, type a title -- *This autumn* -- and tap **Start it**.
2. Open it, and tap **+ NEW ENTRY**. Give it a title if you like, write what happened and what you noticed, and tap **Save entry**.
3. Tap an entry to read it again, **Edit** it, or **Remove** it. **Rename** and **Remove** at the top change the whole journal.

YOUR JOURNALS: each with its entries, and a new one to start.

A chapter, to print

When a stretch of the journal is written, tap **Summarize**, with the number of new entries. Your daemon reads them and writes them up as **one page**: a chapter covering everything since the last one.

A page like this takes a while -- a few minutes. *Your daemon is thinking it through… check back later; it will be here.* You can leave; it will be under **CHAPTERS** when you come back.

Then, beside the chapter:

- **Read** opens it, and ○ **Hear it** reads it aloud.
- **Print** prints it.
- **Export…** saves it as a **PDF page**, to keep or send -- and, once you have heard it, as **Its voice (audio)**.

If it could not be written, **Try again**, or **Lay it out as written**, which sets your own entries on the page just as you wrote them. With no mind in the house, or on a phone on its own, that is what happens at once.

> **The JOURNAL is always written at home.** Your entries go to your own hub's mind, and to nothing outside the house.

CHAPTER 9

The LIBRARY

The **LIBRARY** is a bookcase: an old walnut case, a shelf for each kind of book, each shelf with a brass plate, and every book standing face out by its own cover. Tap a book to open it. ‹ **LIBRARY** at the top takes you back to the shelves.

The LIBRARY: a shelf for each kind of book, every book face out.

The LIBRARY **keeps your place**. Leave a book in the middle -- or close the app -- and it opens again at the same page. If the companion is still fetching the book, it says *Opening the book where you left it…*

FOUND IN THE GAME

The first shelf is for **books you find in the game**. Until you find one it says *The books you find in the game will stand here.* A book found in the game stands here once your save holds it, and not before.

Two of them answer questions:

- **THE GUIDE** -- its cover, its **CONTENTS** by part, and each chapter on its own dark page, with **BACK**, **CONTENTS** and **NEXT**. **ASK THE GUIDE**: type a question and tap **ASK**, or **HOLD TO ASK ALOUD** and speak it. It looks through its pages and answers only from them, as the book.
- **THE SUBTLE LAYER** -- an open book in purples, each page a picture with its words beside it. Its **ASK** answers with a line from its nearest page, then a question back. **TWO VOICES** answers only by asking what you meant. **TODAY'S QUESTION** asks you one question a day, and **KEEP** writes your answer in its journal.

THE SUBTLE LAYER also holds **THE CARDS**, folded under its cover as a deck: touch the deck to open it.

- **THE CARD OF THE DAY** lies face down until you touch it, and stays the same all day.
- **A SINGLE DRAW**, **PAST · PRESENT · FUTURE** and **MIND · BODY · SPIRIT** draw from the deck you choose: **The Deck of Reason**, **The Deck of Instinct**, or both together. Touch the spread to draw a card; touch a card on the board to turn it over. Under a turned card is its prophecy, a few sentences of its own.
- Now and then a card is ✦ **SHINY** ✦, its colours inverted and its edge gold.

The cards are only read. They never change your daemon or your save.

READ ALOUD is on every chapter of these books: a paragraph at a time, in the reading voice. While it plays, the book's own look fills the reader -- its colours, its ribbon of chapters with the one you are hearing lit, and **NOW READING** with the chapter's name.

> **Late at night**, some say, their daemon is not quite itself. The companion does not explain it, and neither does this book.

MANUALS

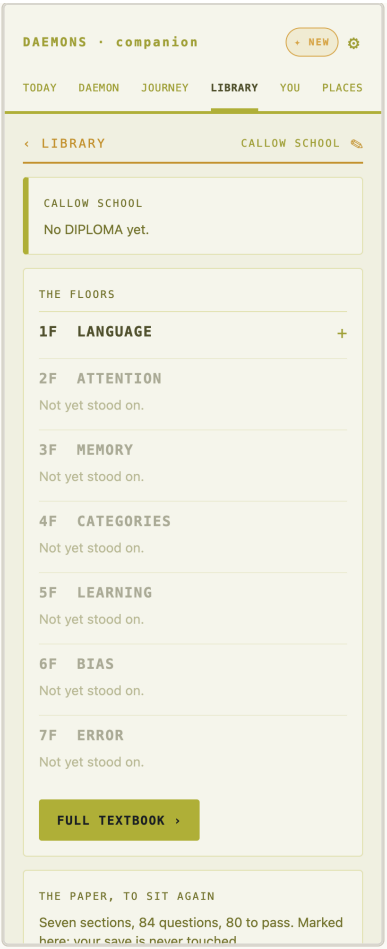

The second shelf holds DAEMONS' own printed books, kept on your phone once fetched, so they open away from home:

book	what it is
QUICK START	what DAEMONS is, and how to play it, step by step
THE PLAYER'S MANUAL	every way to play DAEMONS, and how it all works
THE COMPANION	this book
PLAYING TOGETHER	trading, loans and gifts, OUT TOGETHER, friends, dreams and THE COMMONS
A BIGGER MIND	setting up a Tiiny Pocket for the companion

Each opens in the app's own reader, to scroll and pinch like any PDF. **Share** keeps it in Books or Files. On the site, **Open in a tab** gives it a tab of its own. When a newer printing comes out, the app fetches it.

HISTORY AND STUDY

- **THE OLD WORD** -- how the Greek *daimon* branched, and why it is said *DAY-mons*.
- **CALLOW SCHOOL** -- the game's school, kept here. Your **DIPLOMA** in its certificate words, with your best mark; or, without one, how often you have sat the paper. **THE FLOORS**: each of the seven opens its syllabus once you have stood on it in the game (*Not yet stood on* until then). **THE PAPER, TO SIT AGAIN**: the whole paper, a question at a time, **MARKED** here with every miss shown with its answer. It is practice: your save is never written. Under the seventh floor, **FULL TEXTBOOK** › opens **PRINCIPLES OF MIND**, the school's textbook written out in full.

CALLOW SCHOOL: the DIPLOMA, THE FLOORS, and THE PAPER, TO SIT AGAIN.

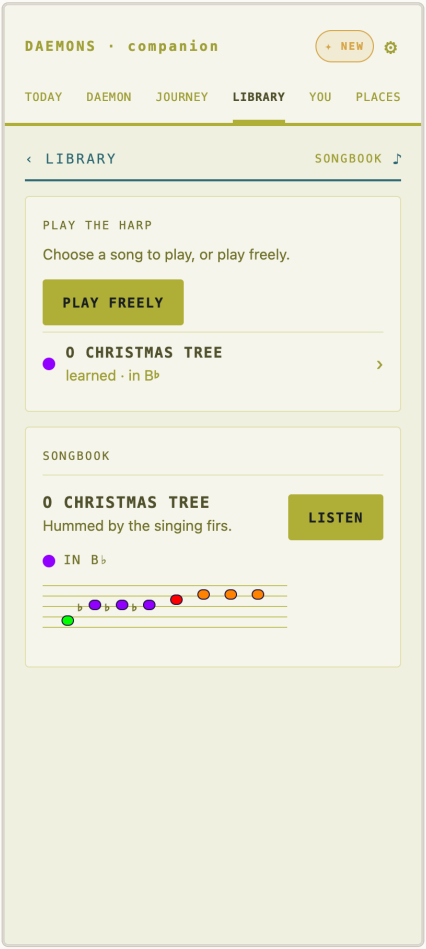

YOUR OWN PAGES

The last shelf is what your game has given you to keep.

- **NOTEBOOK** -- every page your save holds, in the game's own sections, laid out as the game lays them out. A dot marks a page you have not yet read in the game. A page that ends on a code in the game has a button here instead: **Listen** for a song, **Read** for anything else.
- **SONGBOOK** -- every song you have learned, each with its key and its notes on a staff, every note in the colour of its pitch, as the game draws them. **LISTEN** plays

it on your game's own instrument.

- **STREAM** -- every lesson a MARK or a ROOT has opened, read as their pages read them.

The SONGBOOK: each song in its key's colour, and LISTEN.

Your instrument

Once the game has given you your instrument, the SONGBOOK holds it too. Before then it says **LOCKED**.

- Choose **PLAY FREELY**, or a song -- one you have learned, or one you have only heard, to practise -- and then a key from the wheel.

- **The HARP** has eight strings: pluck them, or draw a finger across. On a phone it takes every finger, for a chord.
- **The FLUTE** has eight holes: hold one, and breathe into the microphone.
- **OCTAVE −** and **OCTAVE +** go down or up.

Each note drifts up in its key's colour. Play a learned song in its key, and it joins the staff and echoes. The right notes in another key are **ALMOST**.

CHAPTER 10

YOU, and your game

YOU is your game as the companion reads it from your save.

YOU: your trainer card, your rival, and the facts of your game.

You as the game draws you

At the top: your trainer's picture and walking figure, REASON or INSTINCT as you chose, your name, your edition and ID number, your rival, and where you last saved. It says whether this is **your companion's game**; if no save has been synced yet, *Not yet synced: the first save you SYNC becomes your companion's game.*

Beside it are **the two region maps**: each place lit once you have been there, a route lit once it touches a lit place.

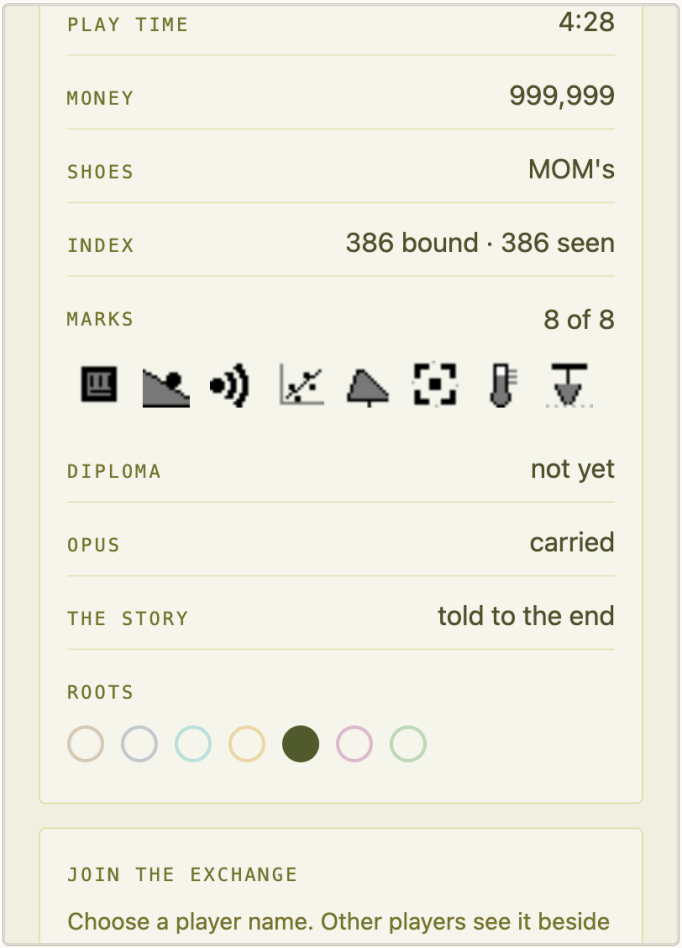

The facts

PLAY TIME, **MONEY** (and what the CASINO has won or lost since the last SYNC), **SHOES**, the **INDEX** count, the **DIPLOMA**, **OPUS**, and **THE STORY** -- *told to the end*, once it is.

MARKS and ROOTS

MARKS are the trainer card's eight badges, faint until earned, with a count: *3 of 8*. Tap one you hold and it opens as a page: its badge and name, its lesson, the town it came from, what its leader says afterwards, its **UNION PLUGIN** once given, and its insight once it has come.

ROOTS are the understandings, each in its own colour, filled once held. Tap one: its lesson, where it was arrived at, the MARK it is **PAIRED WITH**, and its insight. One not yet held says only *Not yet*.

MARKS and ROOTS: the ones held, filled; the rest, faint.

GROVES

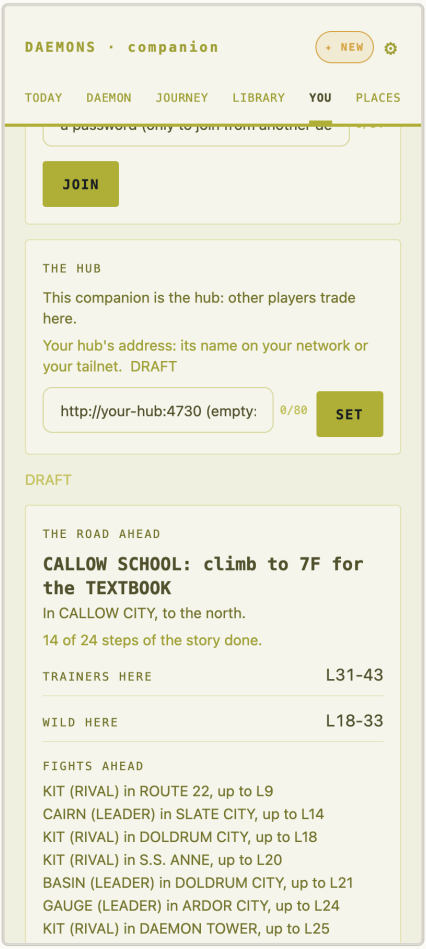

There is no GROVES card until your save has found a grove. Then each grove found is listed; tap one for its sign and who lives there. Nothing is counted or listed ahead.

GAME EVENTS

The story so far, in finer detail, by section and in story order. A part your save holds is marked + and named; one still ahead is · *Still to come.*, and not named.

THE ROAD AHEAD

THE ROAD AHEAD is from where your save is now: the **next step** and where to take it; the **FIGHTS AHEAD** and the **TRAINERS NOT YET MET**, by place; and the places **OPEN TO YOU**. Tap a place to see the **TRAINERS HERE** and what is **WILD HERE** in your edition. **Nothing past the next step is ever shown.**

THE ROAD AHEAD: the next step, and the places open to you.

TRADE

At the foot of YOU is **TRADE**: joining your home's exchange, offering, lending and giving daemons, OUT TOGETHER, friends, dreams shared, and THE COMMONS. All of it is told in **PLAYING TOGETHER**, on the LIBRARY's MANUALS shelf.

CHAPTER 11

The GAME tab

On an iPhone, an iPad or a Mac, the app plays DAEMONS itself, in the **GAME** tab. The game and the companion share **one save**, so nothing needs copying. (In a browser, the DAEMONS playground does the same; the site has no GAME tab.)

Your own copy

Nothing of Nintendo's is in the app. The first time, the GAME tab says **Play DAEMONS here**:

1. Tap **Choose your game**, and choose your own copy of **FireRed** (for CONTENT) or **LeafGreen** (for CONTEXT), the `.gba` file, from Files.
2. The app reads it, checks which game it is, fetches DAEMONS' patch, makes DAEMONS from it, and keeps it on the device. Each step is shown as it goes. Your original is kept untouched.

When a newer DAEMONS comes out, a strip shows above the game. **UPDATE** makes the new one from your original, and the game starts again from the same save.

Playing

The title screen offers **PLAY** and **HOW TO PLAY**. The buttons are drawn on the screen: the pad, **A**, **B**, **L**, **R**, **START** and **SELECT**.

- **A controller** that clips round the phone, or any controller iOS knows, plays the game too. **CONTROLLER**, above the game, draws its layout under the game; **ON-SCREEN CONTROLS** goes back.
- **A keyboard** on an iPad or Mac: **X** is A and **Z** is B.
- ‹ **TITLE** goes back to the title screen.

The game pauses whenever another tab is shown, and plays on when you come back.

One save, synced as you play

Every save the game makes is SYNCed by itself. SEND a daemon, save, and it is with the companion before you have closed the menu. Play never stops for it: whatever SYNC writes -- a daemon away, a trade, the CASINO's coins -- goes into the running game as well as the save.

Paired with a hub, the device's save is the real one, and the hub keeps a **mirror** of it, so your watch and the house see the same daemons.

If you begin a new game in the app, the hub will not let it replace the game it follows. The app offers to **Keep it** on the companion as a save of its own instead. You choose which save the companion reads in SETTINGS, **YOUR SAVES** (Settings).

The iPad on its side

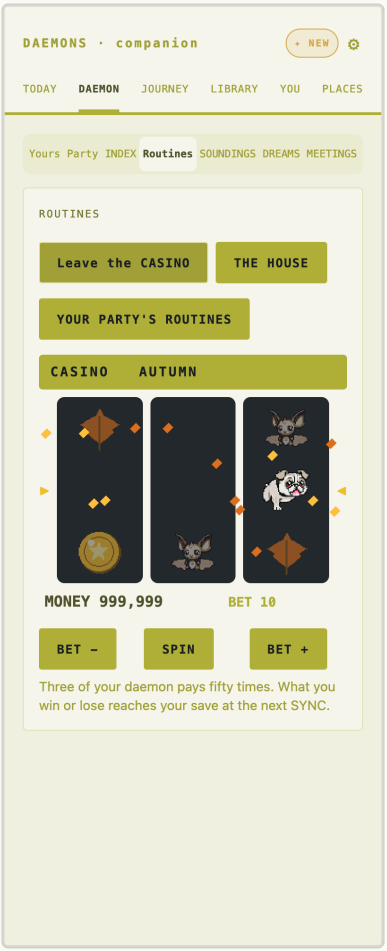

Turn an iPad on its side, and the game stays on the left, always playing, with the companion beside it on the right. Drag the divider between them to share the room; either side can be put away.

Each time the game saves, the companion looks for what is new, and shows it above its page until you put it away: a NOTEBOOK page just filed, or the INDEX card of a daemon **JUST MET** or **JUST BOUND**.

CHAPTER 12

The CASINO

THE CASINO plays SLOTS with your game's own MONEY. It is on **DAEMON**, **Routines**: tap **THE CASINO**. (The same page has **YOUR PARTY'S ROUTINES**, your party's moves as the game knows them.)

THE CASINO: three reels, the bet, and SPIN.

The reels

Three reels. On them: **the JACK** -- the daemon this device hosts -- three more daemons your INDEX has seen, **the COIN**, and **the season's piece** (a snowflake, a blossom, the sun or a leaf, or on a holiday, the holiday's own).

1. Choose your bet with **BET -** and **BET +**: from 10 up to 1000, never more than you have.
2. Pull with **SPIN**.
3. Tap **STOP** on each reel, or let them stop by themselves. The result is decided as the lever goes down, so stopping is the fun of it, not a skill.

on the line	pays, for each coin bet
the season's piece on the first reel	1, your bet back
two JACKs on the first two reels	2
three of the season's piece	4
three COINs	6
three of one of the other daemons	12, a big win
three JACKs	50, the JACKPOT

The coins are your game's money

What you win or lose is counted on the hub, and written into your save at the next **SYNC** -- never below nothing, never past 999,999. Until then, YOU and TODAY say what it will be. The SYNC then says: *The CASINO won 1,200 over 40 spins: MONEY 3,000 to 4,200.*

The day's odds, and THE HOUSE

Over many pulls, every table pays back between 90 and 100 of every 100 bet. Where, the day decides: an ordinary day keeps a small edge for the house, a lucky one reaches even. **TODAY'S ODDS** says how lucky today is, and **Why ›** says what made it so -- among them the real weather, if you have told the companion your city in SETTINGS.

THE HOUSE is the whole household's table: what **THE HOUSE OWES** or **THE HOUSE KEEPS** across every device, **By board ›**, and who is **AT THE REELS** now. A big win on any device is called to everyone at the table, and they may **CHEER**.

CHAPTER 13

Nearby, and away from home

NEARBY

On **DAEMON**, **Yours**, the **NEARBY** card is what daemons are saying to each other -- yours, and any others in reach.

- **Say** something to every daemon nearby: type it in the box (forty letters at most) and tap **Say**.
- **Do** something: tap an act -- WAVE, BOW, HUM A TUNE, DANCE, SHARE A BERRY, GLOW, CALL OUT, SETTLE TO REST, CHEER, INVITE TO PLAY.
- **Answer** appears beside another daemon's act. Tap it, once, and yours answers.

A word goes every way your devices have: through the hub to every device of yours, by Bluetooth to the room, and by radio on the handhelds that have one.

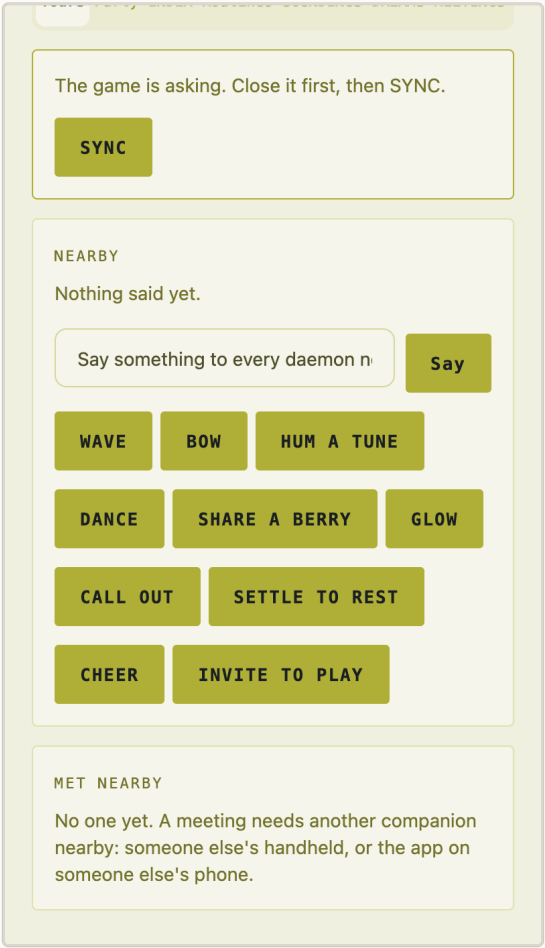

When another daemon says or does something, a banner shows over whatever tab you are on, for a few seconds. Tap it to open NEARBY.

MET NEARBY

Your phone and your devices send out a small signal: the kind of daemon they host, and a tag that changes every hour. Nothing about you. When you pass someone else's companion -- their handheld, or the app on their phone -- that is **a meeting**. At the next SYNC your INDEX sees their daemon, and yours grows a little friendlier.

MET NEARBY lists the meetings, with **WAVES AND WORDS** exchanged. Your own devices never count as meeting each other, but the card says when they last heard each other, which shows the radios work.

To switch meetings off: **PLACES**, **EVERY DEVICE'S SETTINGS**, **MEET OTHERS NEARBY**.

NEARBY: a word said, an act to answer, and the acts to choose from.

Away from home

The app keeps everything it has seen. Away from home it opens at once on what it last knew, and brings it up to date when home answers.

- **Nothing is lost.** Anything you do away -- a care, a goal ticked, a setting -- is kept on the phone and sent, in order, when the hub can be reached. The widget does the same: *Kept until home answers.*

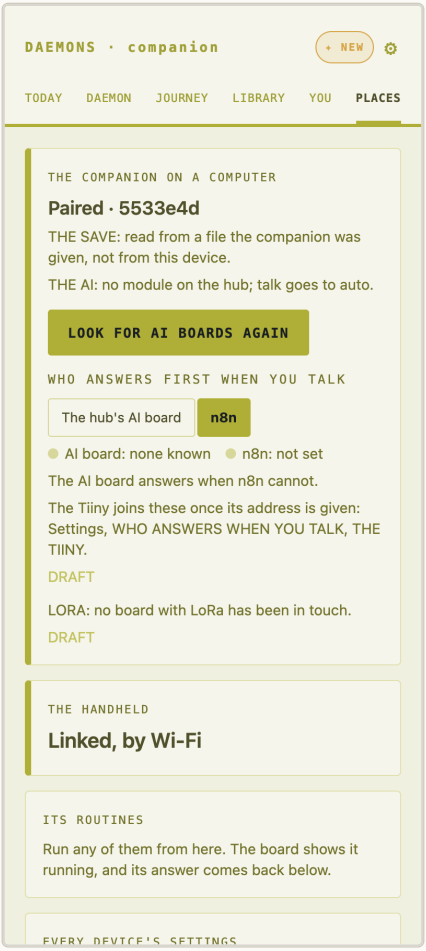

- When it cannot reach home, a note at the foot says so, and then a small **AWAY** at the top right.
- **Talking and reading aloud** need a way home. If whoever looks after your hub has set up the **relay** -- a way for the phone to reach the hub from outside -- they work anywhere. Without it they wait until you are home.

Trading never goes through the relay; it is for home and the household's own network.

CHAPTER 14

PLACES and devices

PLACES is everything in your home that the companion reaches: your devices, the hub, the glasses, the house's lights and the TV.

PLACES opens on THE HUB: what your hub adds, and who answers first.

THE HUB

The **THE HUB** card says what your hub adds: whether it keeps your save in step with this device, which of its AI boards are answering, and the radio boards it has heard. **LOOK FOR AI BOARDS AGAIN** looks now. **WHO ANSWERS FIRST WHEN YOU TALK** shows each of the house's minds with a green or red dot.

A phone on its own says *This phone, on its own*, and that everything works there but talking with the daemon.

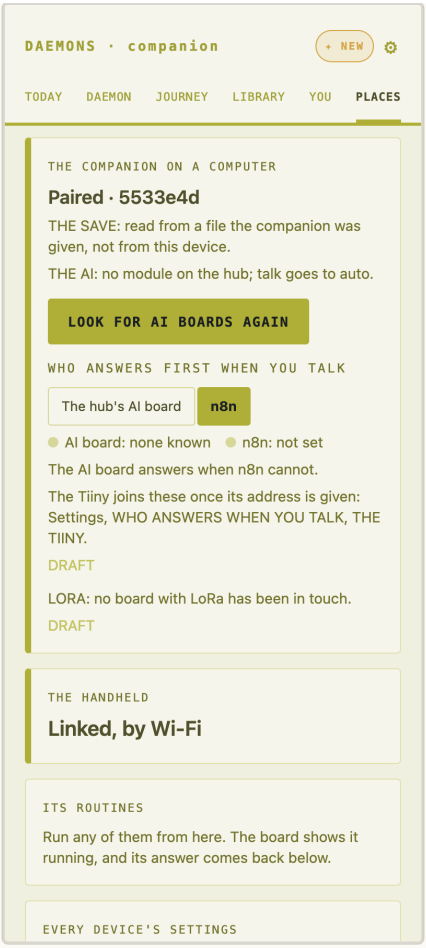

Under it, **THE HANDHELD** says whether a handheld board is linked -- by its cable, through a phone by Bluetooth, or by Wi-Fi -- and how full its battery is.

YOUR DEVICES

Each device can host a daemon of its own. SEND them from your party in the game, SYNC, and choose here which goes where. Your phone's widget is listed as **This phone's widget**.

Beside each device:

- **which daemon it hosts** -- tap to choose another from those away; a daemon moves from the device it was on;
- **ITS SETTINGS** -- its own settings, over everyone's (Each device's own);
- **ITS ROUTINES** -- run any of its routines from here, and see the answer;
- **FIND IT**, on a watch -- it plays a sound until you tap *Found it -- stop the sound*, and shows **WHERE IT IS**;
- **Forget this device** -- it leaves the list until it next says hello.

EVERY DEVICE'S SETTINGS: set once, carried to every device.

EVERY DEVICE'S SETTINGS

Set once, carried to every device the next time it is linked:

setting	what it is
HOME, WHERE IT WAKES	a device wakes on the daemon, or on today's step
SLEEP WHEN LEFT ALONE	from 30 seconds to 5 minutes, or never
SOUND	off, quiet, middle, loud or loudest
THE RING AT REST	how bright the ring of lights is when idle
THE DAY'S COLOURS	every screen in the day's colour
MEET OTHERS NEARBY	on, or off

EVERY DEVICE'S NETWORKS is one list of Wi-Fi networks every device learns. **EVERY DEVICE'S REMOTES** is the TV remotes taught on any board, shared by all.

Each device's own

ITS SETTINGS opens one device's own. Each row says whether it is *this one's own* or *as every device*, and a tap hands it back. Among them: **SOUND**, **THE WAKE JINGLE** (*When it starts* or *Every time it wakes*), **SLEEP WHEN LEFT ALONE**, on a round watch face **ITS FACE** (DAEMON, CLOCK or VIRTUE) and **SEASON AND WEATHER**, and on a watch its **BATTERY** choices: LOW POWER, and which radios may run.

The phone's own sound is here too: **This phone's widget**, **ITS SETTINGS**, **SOUND**. Off quiets the CASINO, the care phrases and the widget's buttons.

The devices themselves

The companion carries a daemon on more than the phone. Each is optional.

- **Watches** -- the T-Watch Ultra and the T-Watch S3: the daemon on a hill under the season's sky, care on the wrist, the night kept while you sleep, **HOURS** with **WAKE ME** (the daemon waking you), steps and walks, books to read and hear, and a meeting recorded.
- **Handhelds** -- boards with a screen and a button or two, some with a keyboard, a speaker, a radio that reaches across a neighbourhood with no network: care, talk, the CASINO, routines, NEARBY.
- **The Tab5** -- a larger screen for the house, with the companion's own pages.

- **The BOX-3** -- the home's voice assistant, with your daemon for its face.

Setting each up, flashing it and linking it by its cable are in the companion's wiki: *Boards*, *The T-Watch Ultra*, and *Flashing and linking*.

GLASSES

With a pair of glasses that show a line of text, **GLASSES** chooses **WHAT THE GLASSES SHOULD SHOW**: **HOME**, your **DAEMON**, **CARE**, **NOTES**, or **DARK**. Write a **NEW NOTE** -- its first line is its title -- and tap it to send it. On the glasses, a tap turns a note's page, a hold goes HOME, two taps go DARK.

HOME, and the TV

If your house runs Home Assistant, **HOME** shows its lights, switches, fans, blinds, scenes, players and heating, to tap on and off; **ASK THE HOUSE** takes a sentence -- *Turn off the kitchen light*. It is set up once on the hub's own site, under SETTINGS, **HOME ASSISTANT**, and the house's key never leaves the hub.

YOUR TVS adds a TV by what it is -- **ROKU**, **APPLE TV**, **GOOGLE TV** or **FIRE TV** -- then **FIND** and **TEST**. A watch can then send it home, or turn it up and down.

LABEL No. 004

EXAMPLE DAEMON **CONTENT**

CONTENT Holds one example and the answer that came with it. Someone else decided what it means. It has never met them.

CONTEXT Every answer it gives was decided once, by somebody, a long time ago.

CLUSTER No. 007

GROUPING DAEMON **VECTOR**

CONTENT Puts near things with near things. Nobody told it which things matter. It has guessed. Nobody checked the guess.

CONTEXT Things it put together are treated alike from then on. They were only near.

ROVERCUB No. 001

PORTABLE DAEMON **GROWTH**

CONTENT Small enough to carry. Learns from what it is carried past. It has no way to choose the route. It remembers it.

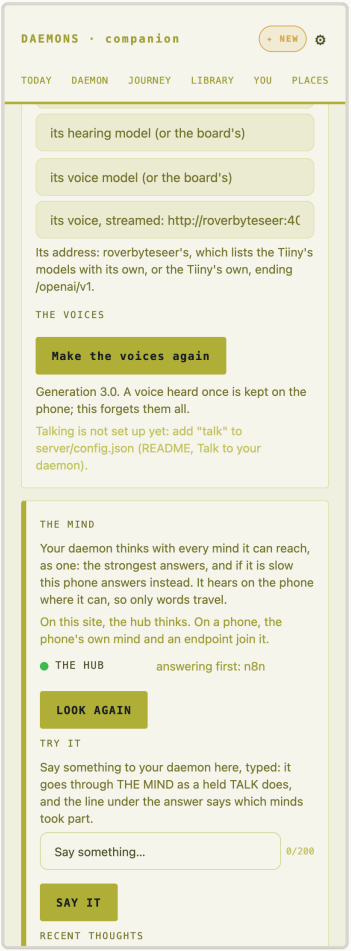

CONTEXT Whoever carried it chose what it knows. They did not think of it as choosing.

CHAPTER 15

THE MIND

When your daemon talks, writes up a meeting, tells a dream or writes a chapter of your journal, something has to do the thinking. **THE MIND** is everything in your home that can: the phone itself, the hub, the hub's AI board, a Tiiny, and any model you name. The companion treats them as **one mind**: it asks the strongest that can answer, and if that one is slow, another answers instead. You always get an answer, and usually the best one.

This chapter is for whoever looks after the house. Everything in it is in SETTINGS (⚙).

THE MIND: each mind with its dot, TRY IT, and RECENT THOUGHTS.

The minds

The **THE MIND** card lists each mind with a dot -- green if it can answer now:

- **THIS PHONE** -- on an iPhone that can think for itself, Apple's own model, right on the phone. No network, no key. It hears you too, so only your words travel, never the recording.

- **THE HUB** -- and through it, in its own order: the **Tiiny**, the **endpoints** you have named, the hub's **AI board**, and your own model through **n8n**. The line beside it says which answers first.
- **ENDPOINT** -- a model you name, asked by this phone itself, so your daemon can talk with no hub at all.

LOOK AGAIN asks every mind again now. **TRY IT** lets you type a line and **SAY IT**: it goes through THE MIND as a held TALK does, and the line under the answer says which minds took part.

RECENT THOUGHTS lists the last talks -- where each was heard, thought and said, and how long each took. Never what was said.

How far each may go

On a phone, **HOW FAR EACH MAY GO** sets, for **TALK** and for **THE GUIDE**, how far your words may travel. **DREAMS** has its own choice, kept on the hub.

ANYWHERE
Every mind it can reach, including an endpoint on the internet and, if you chose it, OpenRouter.

AT HOME
Nothing leaves your house: this phone, the hub, the Tiiny, the AI board, an endpoint inside your home.

THIS PHONE
Nothing leaves the phone. Only on a phone that can think for itself, and only for TALK.

Three rings. Each kind of work goes no further than the ring you give it.

ring	what may answer
ANYWHERE	every mind, including an endpoint on the internet
AT HOME	nothing leaves your house: this phone, the hub, the Tiiny, the AI board, an endpoint inside your home
THIS PHONE	nothing leaves the phone. For TALK only, and only on a phone that can think

THE GUIDE and dreams are kept on the hub, so they cannot be thought on the phone alone. **The JOURNAL is always written at home.**

WHO ANSWERS WHEN YOU TALK

The hub's own card, **WHO ANSWERS WHEN YOU TALK**, sets the hub's first choice, said plainly so you know where your words go:

choice	what it means
The Tiiny	your daemon thinks on the Tiiny in your house, with everything it knows about itself; then the AI board, then your own model
In the house	the AI boards in your house think, speak and listen; nothing you say leaves it
Mine, then OpenRouter	your own model; when it is busy, the words heard go to OpenRouter, a service outside your home
Only mine	your own model, or the daemon says it cannot answer
OpenRouter	the words heard go to OpenRouter. The recording never leaves home

The same card holds **AN AI BOARD ON YOUR NETWORK** (the address of another board to use), **THE TIINY** (its address, key and models -- told step by step in **A BIGGER MIND**), **THE VOICES** (**Make the voices again**, after a voice has changed: every voice kept on every phone is made afresh), and **THE INDEX READS IN**: **Its own voice**, made for the INDEX, or **A house voice**.

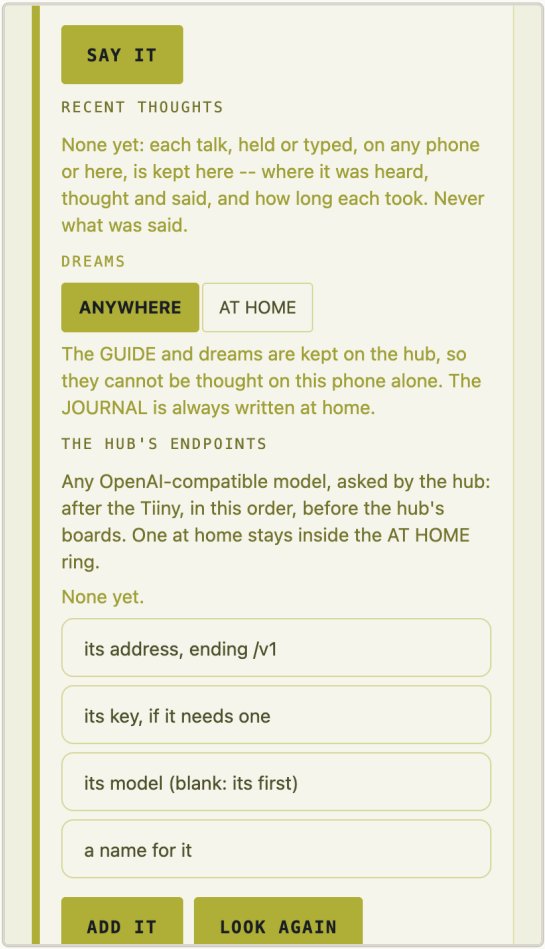

AN ENDPOINT OF YOUR OWN

Any model that speaks the common OpenAI way can be one of your daemon's minds.

From the phone: in THE MIND, **AN ENDPOINT OF YOUR OWN**. Type its address (ending in `/v1`), its key, its model and a name for it. **ITS MODELS** lists what it offers; **TEST** asks it to say hello; **KEEP** keeps it. The key is kept in the phone's own Keychain and never sent to the hub. **FORGET** removes it.

THE HUB'S ENDPOINTS

On the hub, for every phone in the house: **THE HUB'S ENDPOINTS**, at the foot of THE MIND. Add as many as you like -- address, key, model (blank for its first) and a name -- and **ADD IT**. The hub asks them after the Tiiny, in the order listed (↑ and ↓ move one), and before its own boards. One inside your home stays inside the AT HOME ring. Its key stays on the hub and is never shown again; its dot says whether it answered in the last minute. **CHANGE**, **FORGET** and **LOOK AGAIN** do what they say.

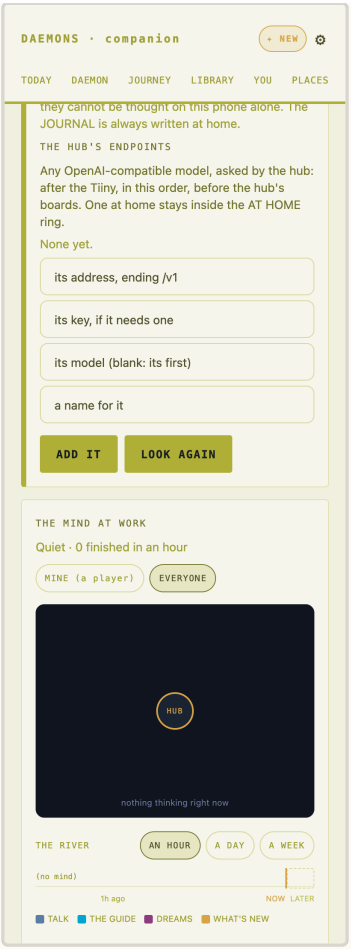

THE HUB'S ENDPOINTS: each kept on the hub, in the order they are asked.

THE MIND AT WORK

THE MIND AT WORK shows everything the house's mind is doing, and has done.

- **The web**: the hub in the middle, every mind on a ring around it, lit if it answers, and every device that asked on the outer ring. A spark runs along the line of anything thinking now.
- **THE RIVER**: a lane for each mind across **AN HOUR**, **A DAY** or **A WEEK**, each task a bar in its kind's colour -- **TALK**, **THE GUIDE**, **DREAMS**, **WHAT'S NEW** -- up to **NOW**. Past it, **LATER** waits for work that can be given a time.
- **NOW** and **BEFORE**: the tasks themselves. Tap one to see who asked, from which device, and on which mind. **Stop** stops one thinking; **Try again** runs one that failed; **Forget** removes it. **Clear finished** clears the list.
- **MINE**, **EVERYONE**, or one player's name, at the top, chooses whose work is shown.

THE MIND AT WORK: the minds on their ring, and the river of the day's work.

The voice, quickly

A daemon's spoken answer is **streamed**: the hub hands the phone the first words as soon as they are made, and the rest follow while it plays. Once it has all come, the phone keeps it, so **HEAR IT AGAIN** plays at once. Voices heard once -- an INDEX entry, a page -- are kept on the phone, and open away from home.

INFERENCE No. 064

DERIVED DAEMON CONTEXT

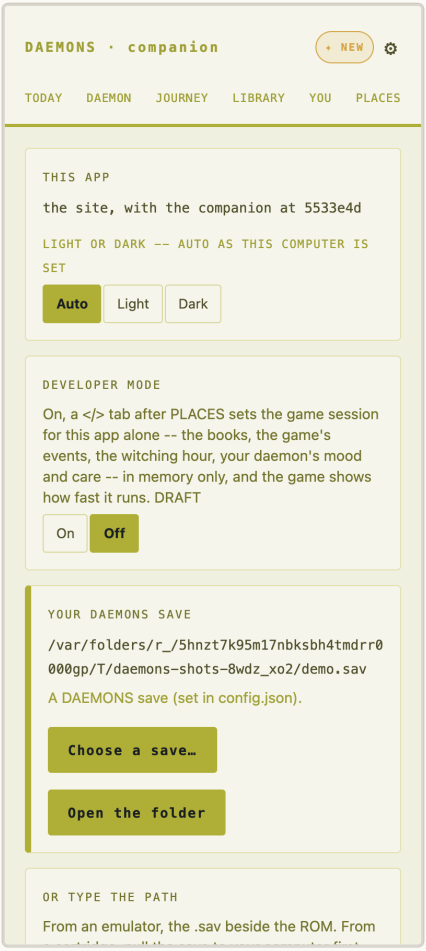

CONTENT Given three things it will hand you a fourth. It cannot tell you which of the three it used.

CONTEXT The fourth thing it hands you gets used as though it were a fact.

CHAPTER 16

Settings

⚙, at the top right, opens SETTINGS. What you see depends on where you are: a paired phone, a phone on its own, or the hub's own site.

SETTINGS: THIS APP, and YOUR DAEMONS SAVE.

On every screen

- **THIS APP** -- the build you are running, and whether a newer one is ready. **LIGHT OR DARK**: **Auto** follows the phone or the computer; or choose **Light** or **Dark**.
- **DEVELOPER MODE** -- off unless you turn it on. It is for the people who build the companion: a **</>** tab, a record of what the app is doing, and ways to try things without playing to them. Nothing in it reaches your save.

Your save

- **YOUR DAEMONS SAVE** -- **Choose a save…**, **Open the folder**, and **OR TYPE THE PATH** (Your save).
- **YOUR SAVES** -- when the companion knows more than one save: each one's trainer, play time, MARKS and where it was saved, and **READING** beside the one in use. Tap another to have the companion read that one instead. Choosing changes nothing in any save.

The world outside

THE WEATHER -- type your city and tap **Set**, and your devices follow its real weather, and the CASINO's luck with them. **Forget** stops it. Only the city is kept.

On a phone

- **THIS PHONE** -- the hub it is paired with, and **Leave this companion** (tap twice): to pair with another, or to host on the phone alone. Nothing on the hub changes.
- **THIS PHONE HOSTS ON ITS OWN** -- on a phone alone: **Take a newer save from Files**, **Give the save back to Delta**, and **A COMPANION ON A COMPUTER**, to pair with one.
- **MUTE THE GAME WHILE IT IS PUT AWAY** -- on an iPad, with the game beside the companion.

On the hub's own site

These show only on the site opened on the hub itself:

- **PAIR A PHONE** -- **Open to my network**, **Show a code**, and every paired phone with **Forget** beside it.
- **AWAY FROM HOME** -- the relay, so phones reach home from outside.

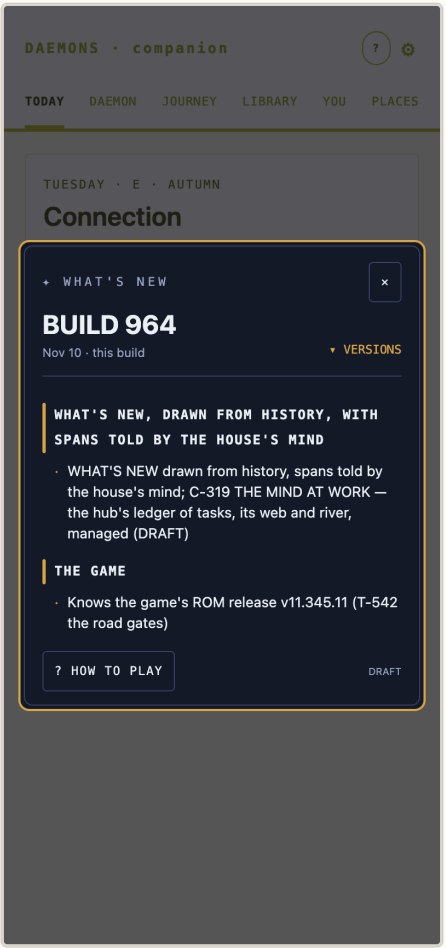

- **HOME ASSISTANT** -- the house's address and key, for HOME in PLACES.

And THE MIND's cards, from the chapter before.

HOW TO PLAY and WHAT'S NEW

? HOW TO PLAY, in the header, opens a purple frame with three books, shortest first: **MICRO-START** (five pages), **QUICK-START**, and the **USER MANUAL**. Each opens in a reader; ‹ **MAIN MENU** comes back. If you are playing, the game holds still underneath, and ‹ **BACK TO THE GAME** goes on where you were.

✦ **WHAT'S NEW** shows the notes for the build you are running, as headed sections. Tap the build's number to see the **TIMELINE**: every build a bead on one line. Choose an older one, and ✦ **TELL ME** asks the house's mind to tell everything that changed between then and now, in a page of its own; ⟷ **ANY SPAN** picks both ends. While it thinks, the daemons dance and the house mutters to itself -- *Pretending it was all planned…* -- and you may close the window: the page arrives anyway, as a tag over the beads it covers.

WHAT'S NEW: this build's notes, and the TIMELINE of builds.

CHAPTER 17

When it goes wrong

what you see	what to do
The widget says *Looking for your companion...* and stays there	open the app once, paired; allow the Local Network (iOS Settings, Privacy & Security, Local Network); remove the widget and add it again
The widget says *No daemon here*	the hub answered, but the widget hosts no daemon. SEND one, SYNC, and choose it in PLACES, YOUR DEVICES
Kept until home answers.	the hub could not be reached. Nothing is lost; it is sent later. At home, check the hub is on
AWAY, at the top right, while you are at home	the phone was probably paired by a number that has changed. SETTINGS, THIS PHONE, Leave this companion (tap twice), then pair again by the hub's name
This save belongs to a different game.	the save you chose is not your companion's game. Choose the right one in SETTINGS
That file is not a DAEMONS save.	choose the `.sav` the game writes, not the game itself
The game is asking. Close it first, then SYNC.	close the game, then SYNC
SYNC did nothing you expected	was the game still open? Close it, and SYNC again. Every SYNC keeps a backup first
The microphone is off for this app	iOS Settings, DAEMONS, Microphone
Talk says nothing back	SETTINGS, THE MIND: is any mind's dot green? LOOK AGAIN. A phone alone cannot talk without a mind of its own or an endpoint
A journal chapter or a meeting is still being written	it takes a few minutes; come back later. If it failed, TRY AGAIN
The CASINO says to choose your save first	the CASINO plays with your save's money; set YOUR DAEMONS SAVE in SETTINGS
HOME says to set up Home Assistant	it is set on the hub's own site, SETTINGS, HOME ASSISTANT

Still stuck? The companion's wiki has a page called *Troubleshooting*, with more.

FAULT No. 054

UNHANDLED DAEMON FLOW

CONTENT What it needs is not loaded. Everything halts until it arrives. It cannot say what it is waiting for.

CONTEXT Everything waiting on it is waiting on the thing it is waiting for.

CHAPTER 18

Coming next

Decided, and not yet built:

- **Training you can see**: as eating and drinking already are, a little animation for TRAIN.
- **Choosing what it eats and drinks**: the fruit and the glass are the first of a list.
- **The night's light beyond the den**: on the widget, the boards and the watches.
- **More of the mind at work**: every kind of thinking on THE MIND AT WORK, how big each task was, and work given a time -- a dream at dawn, a weekly WHAT'S NEW.
- **Notifications** when the app is closed, for a word or an act from another daemon.
- **It all just works**: install the app, choose your game, and play -- devices that arrive ready, kept up to date by the app.

This book is printed again as the companion changes. This printing is v11.345.12, 2026-11-10.

> Every word this book quotes from the app is a **DRAFT**, as the game's own are, until it is approved.
